Paper No(s)/Mail Date 6) Other:							

DETAILED ACTION

Claim Objections

Claims 1-6 are objected to because of the following informalities:

The abbreviations "RTT" and "SGA" recited in claim 1, and "FCS" recited in claim 9 should be explained.

Appropriate correction is required.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 7-8 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 7 recited the steps of a scheduling method, but it did not include any practical application step; therefore, it does not produce a "useful, concrete and tangible result." State Street, 149 F.3d at 1373, 47 USPQ2d at 1601-02. Furthermore, MPEP 2106.II.A states:

"The claimed invention as a whole must accomplish a practical application. That is, it must produce a "useful, concrete and tangible result." State Street, 149 F.3d at 1373, 47 USPQ2d at 1601-02. The purpose of this requirement is to limit patent protection to inventions that possess a certain level of "real world" value, as opposed to subject matter that represents nothing more than an idea or concept, or is simply a starting point for future investigation or research (Brenner v. Manson, 383 U.S. 519, 528-36, 148 USPQ 689, 693-96); In re Ziegler, 992, F.2d 1197, 1200-03, 26 USPQ2d

Art Unit: 2616

1600, 1603-06 (Fed. Cir. 1993)). Accordingly, a complete disclosure should contain some indication of the practical application for the claimed invention, i.e., why the applicant believes the claimed invention is useful."

Claim 8 is rejected because it depends on rejected claim 7.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 9-10 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. Claims 9-10 are missing a plurality of elements shown in figures 3 and 4. These elements are interconnected together to generate "the register_req message", "the measure RTT value", "FCS portion", "the grant value contained the gate message" as recited in claims 9-10.

In addition, claims 9-10 recites the limitation, "the register_req message", "the measure RTT value", "the FCS portion", "the CPU", "the grant value contained the gate message", "the RTT table", "the ONU's queue number". There is insufficient antecedent basis for these limitations in the claim.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 2616

Claim 10 is rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Claim 10 is a single means claim, i.e., where a means recitation does not appear in combination with another recited element of means.

Page 4

Allowable Subject Matter

Claims 1-6 are allowed.

The following is an examiner's statement of reasons for allowance:

Kuo et al, US Patent No. 7,031,343 B1, discloses "Point-to-multipoint passive optical network that utilizes variable-length packets". Kuo does not teach or fairly suggest the apparatus comprising a CPU, an SGA table, a RTT table, a memory control unit, a static grant generation unit, a dynamic grant generation unit, a static grant queue, a dynamic grant queue, a sending message queue, a sending multiplexing unit, a receiving demultiplexing unit, a time setting unit, a report queue, and a received message queue, which are interconnected together to perform functions as recited in claim 1.

Claims 2-6 are allowed because they depend on allowed claim 1.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following references are cited to further show the state of the art with respect to the application:

US PG-PUB No. 2003/0236916 A1, Adcox et al., "Media access control address translation for a fiber to the home system."
